

## *Shoebox Caribou Habitat*

### **Required materials:**

- Shoebox
- Leaves
- Grass
- Twigs
- Cotton balls
- Plastic bags
- Post-it notes
- Small container
- Glue
- Playdough
- Construction paper

Let's create a caribou habitat in a shoebox! First, pick a caribou subspecies and think of where they live. Do they live on the tundra, on an Arctic island, in the mountains or in the forest?

Next, go outside and collect items that remind you of the habitat of the caribou subspecies you selected. Look for rocks, twigs, grasses, leaves and lichen.

Finally, arrange those items in your shoebox to recreate a caribou habitat and decorate the box as you please. Share with others what materials you used to represent the habitat of your caribou subspecies and why.
